

Web accessibility means that people with disabilities can use the Web. More specifically, Web accessibility means that people with disabilities can perceive, understand, navigate, and interact with the Web, and that they can contribute to the Web. Web accessibility also benefits others, including older people with changing abilities due to aging.

When providing online information or instruction, Web authors should ensure that their Web pages are accessible to all individuals, including those with disabilities. For individuals with sensory, motor, or cognitive disabilities, computers can provide equal access to the same types of information and online courses that people without these disabilities enjoy.

rayron can provide all your accessibility requirements including

- Consulting services and user training.
 - Software development and solutions including
 - Screen Readers.
 - Text To Speech.
